

FOOD & BEVERAGE FACILITIES

REDUCE OPERATING COSTS AND INCREASE EFFICIENCIES

Balancing utility costs with water quality can be a struggle for food and beverage facilities. By providing comprehensive water and process solutions through our integrated approach of chemistry, equipment and automation, we help our customers reduce energy and water usage, pollutant discharge and chemical feed. Kurita's customized reverse osmosis units for steam boilers provide a return on investment in energy and chemical savings by increasing boiler feedwater quality, and our reuse and reclamation systems reduce the use of fresh water for plant operations.

FOOD & BEVERAGE FACILITIES

Cleaning & Sanitation

Kurita provides a complete line of Clean in Place (CIP) and Sanitation chemistries and equipment to help food & beverage customers meet or exceed Food Safety Modernization Act (FSMA) guidance. From acidic and alkaline cleaners to FDA approved sanitizers, Kurita helps its customers implement and optimize a safe, effective and economical CIP and sanitation program.

Wastewater

Over-treating your wastewater system can result in excessive chemical costs, and inefficient facility operations can lead to costly surcharges or fines. Our wastewater treatment experts will conduct an extensive plant survey to understand your equipment and regulatory restrictions, then work as an extension of your team to establish an integrated treatment plan for your facility to increase efficiency and minimize operational costs.

Sustainability

Kurita is committed to providing sustainable solutions to our customers. By integrating chemistry, equipment and automation, we help reduce energy and water usage, pollutant discharge and chemical feed. Kurita has designed successful graywater and re-use systems to eliminate the use of fresh water for plant operations, as well as systems that eliminate water discharge to the environment. Each unique solution provides the customer with an all inclusive, turn-key chemical and equipment package that alleviates concerns of effluent discharge, water availability and water quality.

Facilities We Serve

- Bottled water
- Butter & cheese
- Canning, fresh cuts & juices
- Grain milling
- Meat processing & rendering
- Spirits, beer & wine
